## Solubility Graphs

Name: $\qquad$
Using the following graph to answer the questions.

4a) What are the two most soluble substances at $20^{\circ} \mathrm{C}$ ?

1) A solution is made by dissolving 25 grams of calcium chloride in 100 grams of $5^{\circ} \mathrm{C}$ water. What type of solution was made?
2) A 34.2 pph solution of potassium chlorate is warmed to $90^{\circ} \mathrm{C}$. What type of solution was made?
3) How many grams of lead (II) nitrate can dissolve in 100 g of $40^{\circ} \mathrm{C}$ water?

4b) What are the two least soluble substances at $20^{\circ} \mathrm{C}$ ?
5) How many grams of cerium (III) sulfate would dissolve in 250 grams of $0{ }^{\circ} \mathrm{C}$ water?
6) How many grams of potassium dichromate would dissolve in 900 grams of $100{ }^{\circ} \mathrm{C}$ water?
7) A student makes a saturated solution of sodium nitrate with water at $10{ }^{\circ} \mathrm{C}$. What is the pph of the solution?
8) If 300 g potassium nitrate needed to be dissolved in order to make a saturated solution, approximately how much water would be needed at $25^{\circ} \mathrm{C}$ ?

## Solubility Graphs

Using the following graph to answer the questions.

4a) What are the two most soluble substances at $10^{\circ} \mathrm{C}$ ?

1) A solution is made by dissolving 25 grams of sodium chloride in 100 grams of $5^{\circ} \mathrm{C}$ water. What type of solution was made?
2) 52 grams of potassium chloride is dissolved in 100 grams of water at $90^{\circ} \mathrm{C}$. What type of solution was made?
3) How many grams of lead (II) nitrate can dissolve in 100 g of $60^{\circ} \mathrm{C}$ water?

Name: $\qquad$ ?

4b) What are the two least soluble substances at $10^{\circ} \mathrm{C}$ ?
5) How many grams of cerium (III) sulfate would dissolve in 250 grams of $10^{\circ} \mathrm{C}$ water?
6) How many grams of potassium dichromate would dissolve in 90 grams of $90{ }^{\circ} \mathrm{C}$ water?
7) A student wants to make a saturated solution of potassium nitrate with $40^{\circ} \mathrm{C}$. What is the pph of the solution?
8) If 300 g potassium chlorate needed to be dissolved in order to make a saturated solution, approximately how much water would be needed at $70^{\circ} \mathrm{C}$ ?
